#### Learn Python

### Hosted By Jordan

Wednesday, 22nd September 2021

11:30 AM - 5:30 PM EST

Virtual Event will be hosted on ZOOM

#### Details

This is a basic level workshop where all the basics of python will be covered, no pre-requisite are required for this workshop. At the end of the workshop a small project will be given for practice.

## 1. Explanation of status, stopping point, and issues if incomplete

My project is complete the only issue I am facing is getting a local copy of bootstrap. While changing the file path to the local copy I am getting the following error.

```
Access to CSS stylesheet at 'file:///C:/Users/nkatiyar/Desktop/Nalini/COURSES/NBAD/project_1/bootstrap/3.4.1/css/bootstrap-theme.min.css' from origin 'null' has been blocked by CORS policy: Cross origin requests are only supported for protocol schemes: http, data, chrome, chrome-extension, chrome-untrusted, https. connection.html:1
GET file:///C:/Users/nkatiyar/Desktop/Nalini/COURSES/NBAD/project_1/bootstrap/3.4.1/css/bootstrap-theme.min.css net::ERR_FAILED connection.html:7
```

The solution I got was to create a server.

## 2. Discuss the easy and challenging parts of the assignment. How did you overcome all or some of the challenges?

The easy part was creating the HTML pages. The challenging part was to decide on the domain of the project. To decide the domain I got some help from talking to people around me.
